カスタムタグ変換リファレンス

本書は、リライトツールによってStruts1, SAStrutsアプリケーションに含まれるカスタムタグがNablarchのどのタグに変換されるかを定義したものである。

変換ルール: 変換元・変換先の関係を記述している。変換元は、フレームワーク(Struts1/SAStruts)、名前空間接頭辞、タグ名で整理している。 変換例: 変換の一例を記述している。 未対応属性: リライトツールが変換をサポートしていない属性を列挙している。

No -	フレーム	名前空間 接頭辞	変換ルール 変換元 タグ	変換先	変換前	変換後	未対応属性
1	ワーク Struts1	按與辞 bean	cookie	n:set		<pre></pre> <n:set value="\${cookie.JSESSIONID}" var="sess"></n:set> <n:write name="sess.value"></n:write>	
2			define	c:set	/- /sp:getProperty name="sess" property="value" /> /sban:define id="test1_value" value="ABCDE" />	<pre><c:set value="ABCDE" var="test1_value"></c:set></pre>	toScope
2			header	c:set		<%Object test1_value=pageContext.findAttribute("test1_value");%>	value
3					<pre> <br <="" td=""/><td>cc:set var="dummy" value="\$(header.UNKNOWN-HEADER)" /> <%Object dummy=pageContext.findAttribute("dummy");%></td><td></td></pre>	cc:set var="dummy" value="\$(header.UNKNOWN-HEADER)" /> <%Object dummy=pageContext.findAttribute("dummy");%>	
4			include	c:import	 	<pre><c:import url="/welcome.jsp" var="welcome"></c:import> <%Object welcome=pageContext.findAttribute("welcome");%></pre>	transaction, anchor
6			message parameter	n:message c:set	<pre> <br <="" td=""><td><n:message messageld="standard.title"></n:message> <c:set value="\${param.paramName}" var="name"></c:set></td><td>bundle、locale</td></br></br></pre>	<n:message messageld="standard.title"></n:message> <c:set value="\${param.paramName}" var="name"></c:set>	bundle、locale
7			resource	c:import	 	<pre><%Object name=pageContext.findAttribute("name");%> <c:import url="/WEB-INF/web.xml" var="webxml"></c:import></pre>	input
8			size	c:set	<pre><bean:size id="stringSize" name="data001" property="stringArray"></bean:size></pre>	<pre><%Object webxml=pageContext.findAttribute("webxml");%> <c:set value="\$(fn:length(data001.stringArray))" var="stringSize"></c:set></pre>	
9			write	n:write	 <bean:write name="test7.double" property="pty"></bean:write>	<pre><%Object stringSize=pageContext.findAttribute("stringSize");%> <n:write name="test7.double.pty"></n:write></pre>	bundle、filter、format、formatKey
10 11		html	base button	base n:button	<html:base></html:base> <html:button property="button"></html:button>	<pre><base \$(pagecontext.request.requesturl)"="" href="<c:out value="/>"/> <n:button name="button" type="button"></n:button></pre>	altKey, bundle, accesskey, dir, titleKey
